**Services**

… creating your Smart Factory

The **Smart Factory** is not only a vision, but your guarantee for more **productivity** and **competitiveness.**

This takes
more than a software!

Motivation

"Of course we want a Smart Factory, but getting there is **quite complicated** and requires **resources** we don't have."

"The **complexity** involved in designing and implementing software solutions is wearing us down! Where do we even **begin**?"

"Well, actually, our **core competence** is production. But without the right **know-how**, we' re kind of stuck."

Your Issue

MPDV

Our Experience Meeting Your Challenges

mpdv

Why embrace the digital transformation?

- Which goals are worth pursuing and in what order?

- How do you ensure the necessary acceptance at all levels of the company?

- Who supports you in developing a digitization roadmap?

We advise you comprehensively and, in doing so, draw on best practices from all industries. We work with you to identify your challenges and develop strategies to make your digitization project a success.

Strategy

Where do we begin?

- Do you know the actual state of your production?
- Do you know what the target state looks like?
- What goals do you want to pursue?

Place your trust in us - we will support you right from the start. We are also happy to do so independent of suppliers. After all, we know how production works and what it takes to turn the vision of the Smart Factory into reality.

Conception

How to put it into practice?

- Do you have enough employees with the necessary know-how?

- What about your IT landscape? Are all requirements met?

- How can your machines and equipment be connected to the new software solution?

Our experts have already transformed more than 1,400 factories into Smart Factories or supported the process. We ensure that everything runs smoothly and that you can produce more efficiently as soon as possible.

Implementation

What training?

- Who should use the new system in your company?

- What do your employees need to understand about the new solution?

- Do you know how your operators will react to the new software?

Our training program will qualify everyone - no matter if you are a beginner, an advanced user or a developer.

Our certified training program is perfectly tailored to your needs.

Trainings & Certification

How to operate the solution?

- Who is in charge of your manufacturing IT?

- What if you need to configure or upgrade something?

- Do you have several sites or do you want to roll out our solution to additional areas?

We support you to operate and further develop the system in your IT environment or in the cloud (e.g. SaaS). Everything is possible - from a one-off support to full service.

Operation, Roll Out & Upgrade
